The augmentation of technology has lead to a more connected, convenient and informed society.

Do these new advances lend themselves to everyone in communities the same way?

Social impact designs

JCDecaux and Melanoma Institute Australia

Developed an interactive awareness campaign showing screen showing a growing melanoma. When a user donates the growth shrinks considerably.

Fight Cancer

An interactive punching bag to raise funds for the "Dutch Cancer Society". The screen emulates cancer cells that need to be punched out to be cured. It empowers people to join the fight against cancer.

Social impact designs

Womens Aid UK and Ooh Media

Built an interactive billboard depicting domestic violence and used facial recognition software to detect views and fade the bruises. The display counted 327m views.

> 7000000000

An installation demonstrating how fast the population grows. A new human pops up every 400 milliseconds. As space gets restricted, a door can be opened to release some of the humans allowing space for the new ones.

research

assumptions

proto-concepts

thematic intent

Initial concepts

Slingshot

Gamified donations with the theme of gender-based street harassment. The user has to illuminate and remove the anonymity of a harasser by shooting a pellet at a light over their head.

Harassment trails

As a user passes by, a trail of harassment is imprinted on the screen, the only way to clear the screen is to donate to a women's shelter.

Hidden harassment

A display depicting gender based street harassment that is only active when a user's back is facing it. They are able to both view and donate through an opposing mirror.

Initial concepts

Facial Recognition

An A.I. based facial recognition screen that analyses and makes assumptions about you. It shows how privileged you are in comparison with the rest of the world.

Anti-hostile Architecture

An interactive art installation (projection) that could only be interacted with when certain pitches of voice spoke to it. To increase awareness of gender stereotypes engrained in the tech industry.

Tap to Play Donation

A fun way of donating money to a charity. Two users swipe their credit cards and then play some sort of game, the loser of which has to pay the donation.

Initial concepts

Facial recognition smart mirror

An unassuming smart mirror placed in a public space that recognised a users attention and then slowly morphed their face to an older version of themselves to raise awareness for the rising elderly homeless population

Selective voice recognition art

An interactive art installation (projection) that could only be interacted with when certain pitches of voice spoke to it. To increase awareness of gender stereotypes engrained in the tech industry.

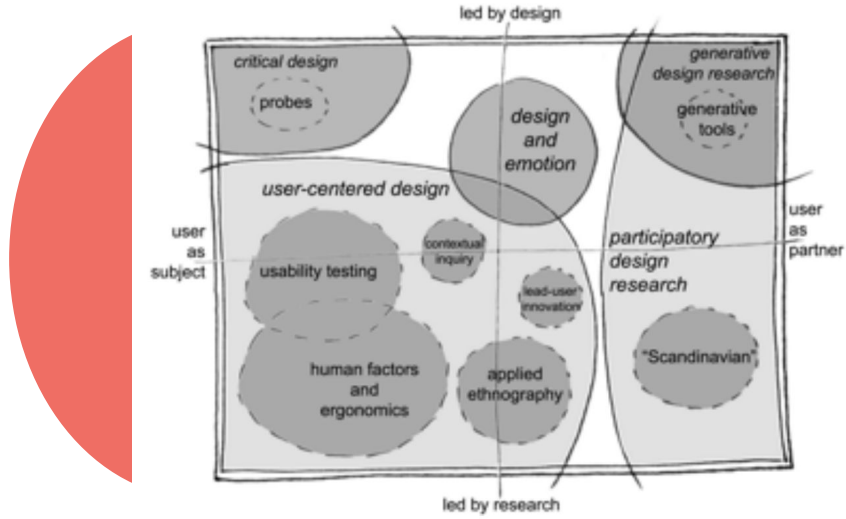

Low powered interactive display

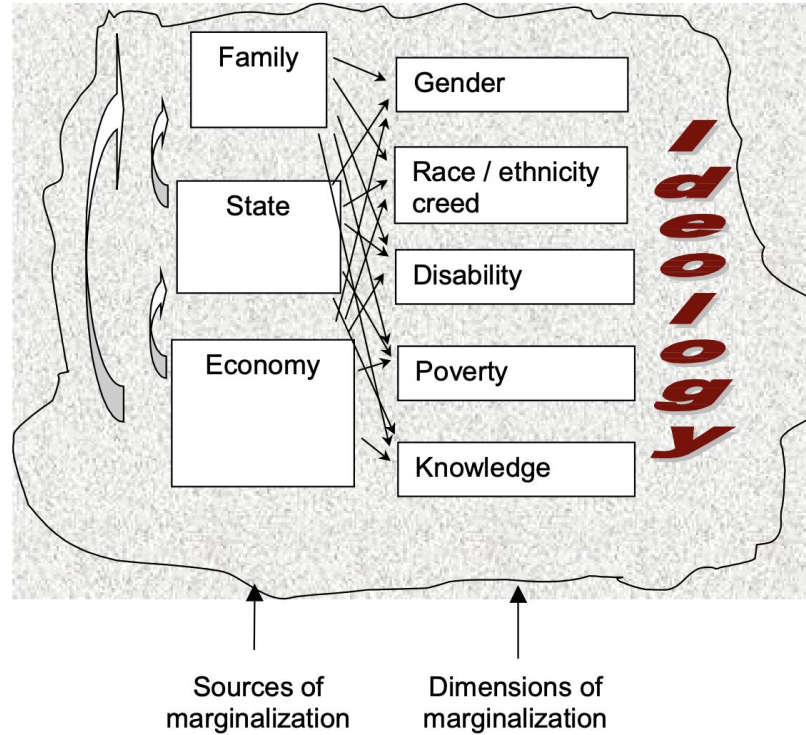

An interactive display that required a low powered device to active it. This displayed was meant to create empathy for those living below the poverty line who aren't able to access new technology.

process

problem

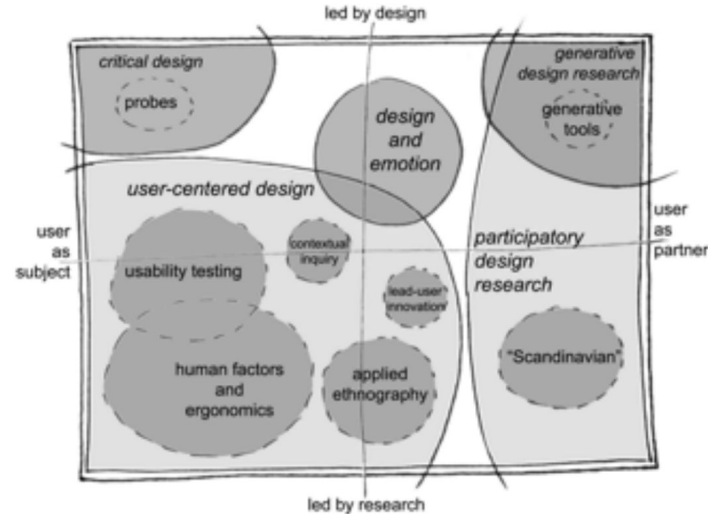

Sources and dimensions of marginalization and resistance

exploitation

trivialisation

**great
advertising,
low impact**

reframe

marginalised

non marginalised

Create empathy through self reflexive interactions in bespoke artistic or pragmatic interventions - realize elements of complex felt lives of the socially excluded in a way that evinces empathic realisation and critical thought

Engage citizens in spheres of their local communities people and organisations in an active way (through thought, financial, informational methods)

proto-concept

**reframed
iteration**

hero concept

Hero concept #1 - Harassment trails

As a passerby crosses the screen a trail of silhouettes repeating phrases of harassment is generated behind them.

At a separate terminal, a user can donate \$2 to a women's right organisation and erase the contents of the display replacing it with a demand to call out street harassment.

Hero concept #2 - Anti hostile architecture

A public bench that is only comfortable for the user when they are lying down. When sitting upright, bumps protrude from the surface.

This forces the user to empathise with what it may be like to have limitations or to feel unwelcome to a space that they are usually comfortable with.

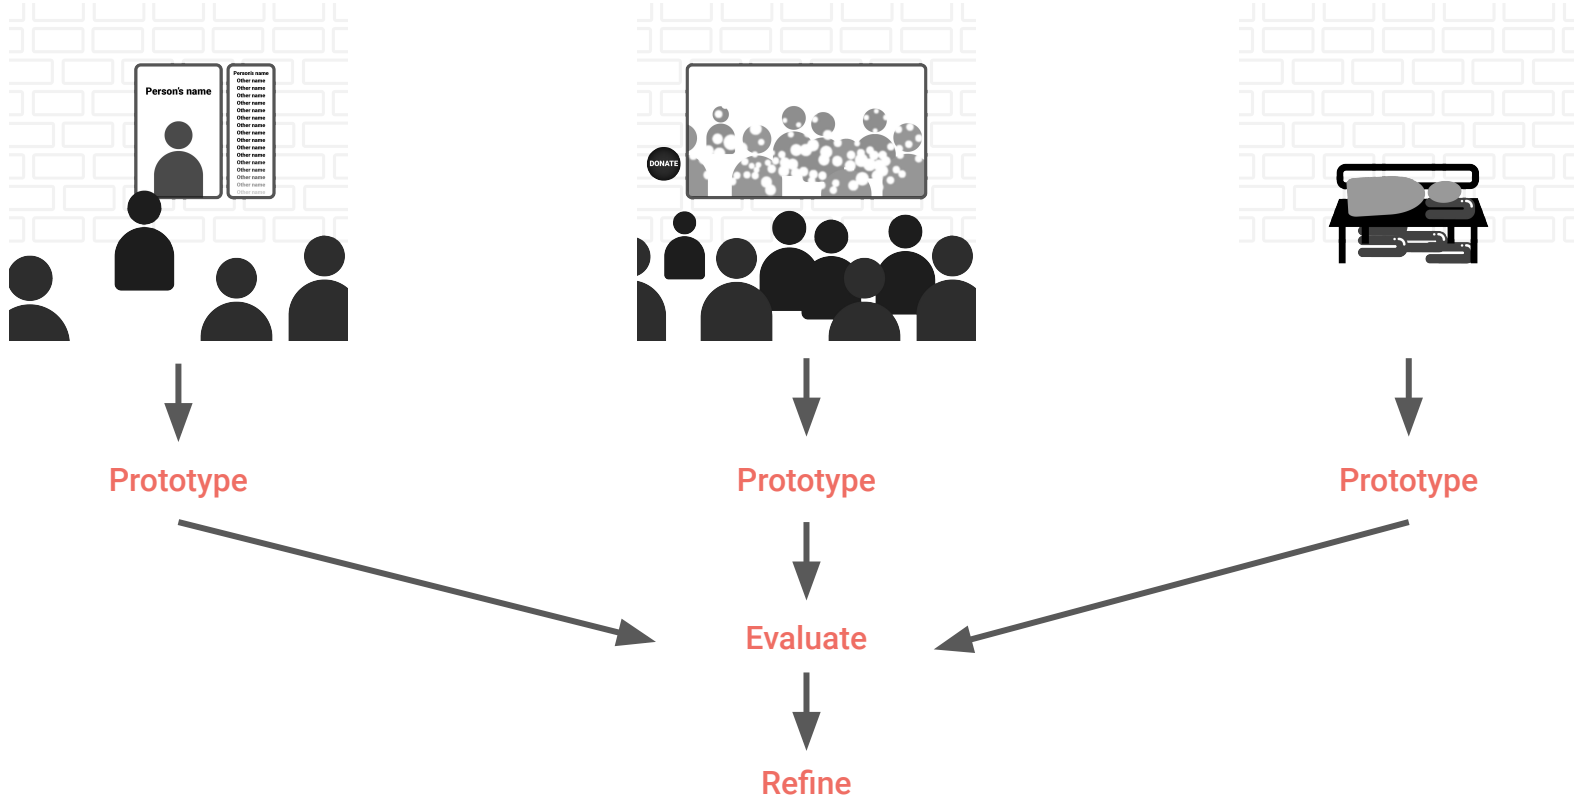

Hero concept #3 - Black Mirror

Portrait mirror that when user looks in it flashes in unison with an LED where they see a cryptic number appear in a list. When they look again, they see nothing.

It induces reflection on the ever increasing role technologies play in our society, and dread in how they or other would interact when you cannot begin to understand them.

Next steps
